Use Case Story:
User wants to share a file with someone via the web

Assumption:
User hasn't clicked on the upload button

Steps:
1. User loads webpage
2. User clicks on the "upload" button
3. User is then prompted to select and upload a file
4. Once the file is uploaded, a short (temporary?) download link is generated for the user
5. User can share the link with anyone

Variable Interactions:
-User clicks "upload another file?" > the page refreshes
-User clicks "cancel" during upload > the file upload will be aborted
